

**Rahul Roy**

**Light-based Bioprinting Product Owner**

*Printing Progress: Recent Milestones in Additive Regenerative Medicine*

Rice bioengineering alum and Texas-native, Rahul Roy graduated in 2014 with an insatiable desire to teach the world about all things 3D-printing.

To that end, he has 6 years combined experience with two of the industry leaders in bioprinting, across a variety of technologies. In that time, he has enabled hundreds of labs to perform ground-breaking research through applications support, trainings, and conferences.

As a Product Owner for CELLINK, he has fostered collaboration between CELLINK and its partners Volumetric and Prellis Biologics through the release of two, light-based biofabrication products: Lumen X, the world's first commercial DLP-bioprinter, and the Holograph X, the world's first holographic multi-photon bioprinter.
